Introduction Arista CloudVision Portal (CVP) uses configlets to create configuration snippets for individual or groups of switches based on user selection. These configlets can be either static or dynamic. Static configlets include static EOS CLI configuration statements as if they were right on the switch configuration file.

Set the router-id to the IP address of the Loopback0 interface configured. On Arista switches, the default BGP administrative distance is set to 200, regardless if it's eBGP or iBGP. As best practice, we will set the eBGP distance to 20, and keep iBGP distance at 200, giving preference to the eBGP routes. # spine1.
