Birds may also repeatedly hit your window if they see their reflection. During the springtime when birds are territorial, they will fly into your window to attack the bird they see in the glass. At nighttime, the causes of birds flying into windows are less understood. Experts are still studying the effects of light from windows on nocturnal birds.

What Does it Mean When a Bird Hits Your Window? | Ryan Hart

Seagulls end up forgoing fish and insects in order to live on a diet of bread, fries and ice cream. If that diet isn't good for humans, it certainly isn't good for gulls . Now, many of us don't feed the birds, but that doesn't stop them from stealing our beach eats.

For The Love Of God, Stop Feeding Seagulls. Here's Why ...

The number of birds that fly to escape the tunnel towards the clear glass provides a score for avoidance of the deterrent. Light netting is placed in front of the glass to prevent injury to the birds, and they are released after one flight. Visual deterrents or patterns, such as those tested by ABC, can break up reflections and reduce related ...

Stop Birds Hitting Windows | American Bird Conservancy

The glow draws birds in, and they can become trapped. Once in a beam of light, they may be reluctant to fly back out, or become disoriented and pulled off course. Confused and exhausted, they often collide with buildings, homes, or each other. But it doesn't have to be that way.

Prevent birds from hitting windows with these products ...

Dr. Dan Klem's research has proven that birds will avoid flying through spaces that are 2" high or less and 4" wide or less (this is known as the 2" x 4" Rule'). We space the BirdSavers cords 4-1/4" apart. Because the cords themselves are 1/8" thick, the BirdSavers we custom make are actually spaced at 4-1/8" apart.
