Because skeletal muscle cells are long and cylindrical, they are commonly referred to as muscle fibers. Skeletal muscle fibers can be quite large for human cells, with diameters up to 100 μm and lengths up to 30 cm (11.8 in) in the Sartorius of the upper leg. During early development, embryonic myoblasts, each with its own nucleus, fuse with up to hundreds of other myoblasts to form the multinucleated skeletal muscle fibers.

10.2 Skeletal Muscle - Anatomy and Physiology

This book is mainly concerned with skeletal muscle physiology and biochemistry, and covers from embryonic development, muscle organization, energy metabolism, structure of the muscle fibre to mechanisms of fatigue. The text is fully illustrated, with

Description. This text is an essential resource for any practitioner interested in how muscles work, whether from the point of view of training for sport, treating physical problems and diseases, or understanding the basic cellular physiology and how the function interrelates with other body systems. It provides outstanding material on skeletal muscle physiology and biochemistry.

The skeletal muscle's anatomical location or its relationship to a particular bone often determines its name. For example, the frontalis muscle is located on top of the frontal bone of the skull. Similarly, the shapes of some muscles are very distinctive and the names, such as orbicularis, reflect the shape.

Skeletal muscle contraction requires large amounts of energy in the form of _____ in order to complete the sequence of cyclic events that lead to sarcomere shortening. ATP _____ muscle fibers have large myoglobin stores, slow contraction velocity, and the highest resistance to fatigue.

A&P Ch. 10 Review Flashcards | Quizlet

Skeletal muscle fibers are organized into groups called fascicles. Blood vessels and nerves enter the connective tissue and branch in the cell. Muscles attach to bones directly or through tendons or aponeuroses. Skeletal muscles maintain posture, stabilize bones and joints, control internal movement, and generate heat.
